## 1. OneSpin 360 EC-FPGA\* Software Support

---

You can optionally use the third-party OneSpin 360 EC-FPGA\* sequential equivalence checking tool to verify the logic equivalence between specific netlists following compilation. The 360 EC-FPGA software can help you to confirm that aggressive Compiler optimizations do not introduce unexpected results.

For example, in the current version of the Intel® Quartus® Prime Pro Edition software, you can use the OneSpin 360 EC-FPGA software to confirm the logic equivalence between the routed and retimed netlists after circuit retiming in Intel Stratix® 10 designs, or after making changes to initial conditions. The 360 EC-FPGA tool can confirm that the routed and retimed netlists remain functionally equivalent after those changes.

*Note:* OneSpin 360 EC-FPGA logic equivalence checking is supported only for Intel Stratix 10 designs in the Intel Quartus Prime Pro Edition software.

### 1.1. Verifying Post-Route Retiming with OneSpin 360 EC-FPGA Software

Enabling OneSpin logic equivalence for Intel Stratix 10 devices involves obtaining the 360 EC-FPGA software and license, adding commands to the Intel Quartus Prime Settings File (.qsf), compiling the design, and running the 360 EC-FPGA tool.

Follow these steps to verify functional equivalence between the routed and retimed netlists with OneSpin 360 EC-FPGA software:

1. Obtain the [360 EC-FPGA\\* software and license](#) for Intel Quartus Prime Retiming Verification from OneSpin Solutions.
2. To enable formal verification in the flow, open your Intel Stratix 10 project in the Intel Quartus Prime Pro Edition software, and add the following assignments to the `<project_name>.qsf` file. These assignments direct the Compiler to generate the `onespin.tcl` script during compilation:

```
set_global_assignment -name ENABLE_FORMAL_VERIFICATION ON
set_global_assignment -name EDA_SIMULATION_TOOL "ModelSim (Verilog)"
set_global_assignment -name EDA_TIME_SCALE "1 ps" \
-section_id eda_simulation
set_global_assignment -name EDA_OUTPUT_DATA_FORMAT "VERILOG HDL" \
-section_id eda_simulation
```

*Note:* Although your RTL can be Verilog HDL, SystemVerilog, or VHDL, the Intel Quartus Prime EDA Netlist Writer requires that you specify the assignments only in Verilog HDL, as the example shows.

3. To run full compilation (including Synthesis, Plan, Place, Route, and Retime stages), click **Start Compilation** on the Compilation Dashboard. The Compiler preserves a snapshot of the results at each stage.

- To generate a Verilog Output File (.vo) containing a snapshot of the routed netlist, type the following command in the Console:

```
quartus_eda --snapshot=routed <project_name>
```

The .vo generates to <project\_directory>/simulation/modelsim/routed/<project\_name>.vo.

- To generate a .vo containing a snapshot of the retimed netlist, type the following command in the Console:

```
quartus_eda --snapshot=retimed <project_name>
```

The .vo generates to <project\_directory>/simulation/modelsim/retimed/<project\_name>.vo.

- To launch OneSpin 360 EC-FPGA, type the following command in the Console within the project directory:

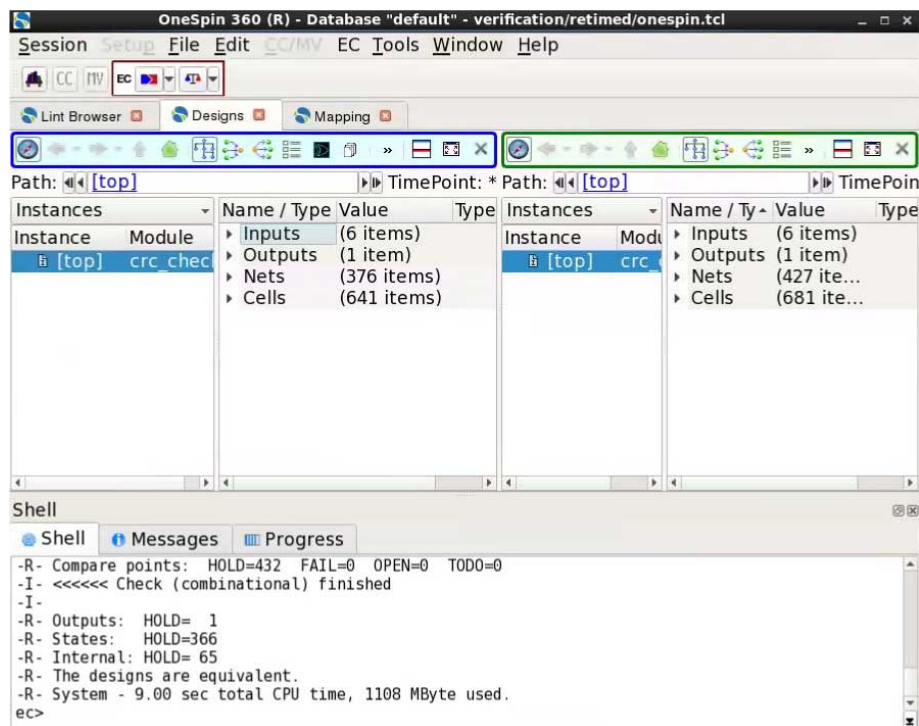

```
onespin -i verification/retimed/onespin.tcl
```

The -i option opens the 360 EC-FPGA software GUI.

- Follow the instructions in OneSpin's 360 EC-FPGA software documentation to run 360 EC-FPGA and confirm logic equivalence of the routed and retimed netlists. 360 EC-FPGA compares the routed and retimed netlists and reports the functional equivalence.

If 360 EC-FPGA reports that the netlists are functionally equivalent, then retiming optimization did not change the functionality of the design.

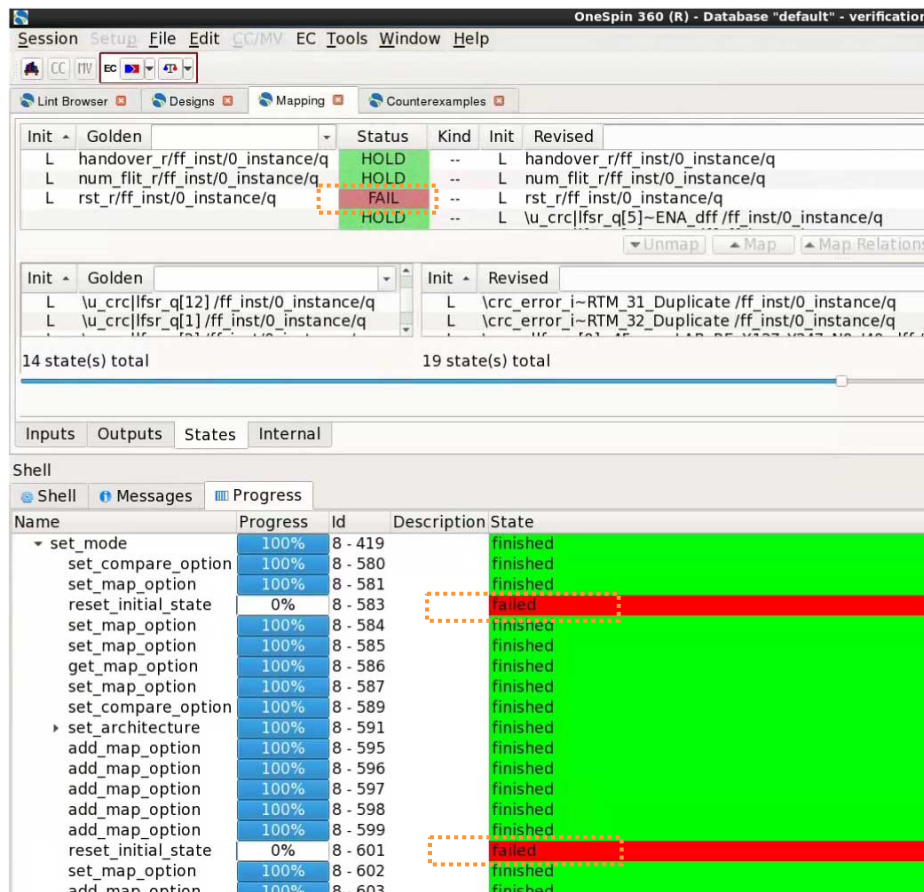

**Figure 1. 360 EC-FPGA\* Shows Functionally Equivalent Design**

If 360 EC-FPGA reports failed points in the netlist, review the Intel Quartus Prime compilation messages for any warning that relates to this failed point before further debugging the designs in 360 EC-FPGA.

Figure 2. 360 EC-FPGA\* Shows Failed Points in Netlist

If the 360 EC-FPGA\* reports open states without failure, this indicates that the design complexity may exceed the capability of the 360 EC-FPGA software. Contact OneSpin support for assistance with designs that exceed 360 EC-FPGA software capabilities.

## 1.2. OneSpin 360 EC-FPGA Software Support Revision History
